

The Nuclear Arms Race

By Angel Avila, Alan Cruz P.3

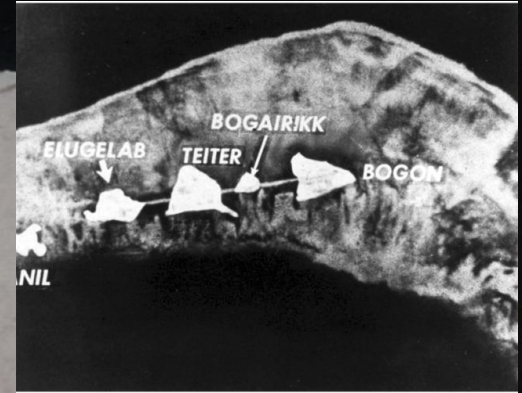

The U.S. And USSR Detonate Hydrogen Bomb

Information

In November 1st 1952 the first Hydrogen bomb was detonated by the United States of America on the Island of Elugelab in the Marshall Islands . Ivy mike was the codename for the Hydrogen bomb that was dropped by the United States. The soviet union first true two stage hydrogen bomb was nicknamed the RDS-37 and it was tested by the USSR on November 22, 1955.

The RDS-37 was tested in semipalatinsk in kazakhstan. This caused tension between the two countries during the cold war. It showed that both countries were beginning to compete to build strong and more powerful Advanced nuclear weapons.

M.A.D. Mutual Assured Destruction

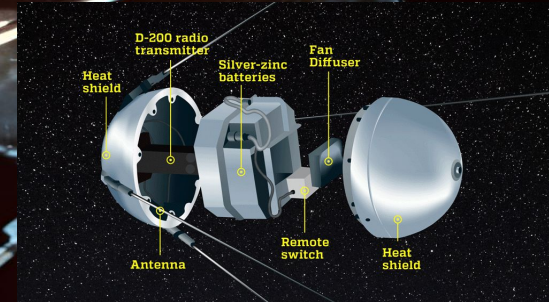

Information

Mutual assured destruction (MAD) is the concept that if one country launches a nuclear attack the other will respond with equal force resulting in the destruction of both nations. During the cold war the United States and the Soviet Union built large stockpiles of nuclear weapons to prevent each other from launching an attack. At first they relied on bombers later they included land-based missiles and submarines to ensure they could always respond.

After the Cuban Missile crisis leaders understood how dangerous this situation was. They aimed to maintain a balance that would stop either side from starting a war. Although there were some close calls this balance helped prevent nuclear conflict while keeping the world on edge.

The space race: Soviets Launch Sputnik 1957

Information

In 1957 the soviet union launched sputnik. Sputnik was the first artificial satellite to orbit earth, which shocked the United States of America and it demonstrated that the soviet union had advanced technology. The sputnik was a small, metal sphere with four antennas that sent radio signals back to earth.

This was concerning to the United States because with the same technology used to launch sputnik could also deliver nuclear weapons. The launch marked the beginning of the space race a competition between the United States and the Soviet Union to achieve milestones in space exploration.
